SHURflo RV & Marine Switch Adjustment

SHURflo pump switches are factory set for optimum performance. Some fine tuning and service or maintenance may need to be performed.

Reasons to adjust the switch*:

**Factory**

**Plumbing system tests:**
- Adjust \(\uparrow\): Pump cycles
- \(\downarrow\): Pump takes too long to shut off; positive shut-off.

**Dealer & Service Tech**

- Adjust \(\uparrow\): Pump cycles excessively (causing noise?).
- \(\downarrow\): Long time for pump shut-off; positive shut-off.

**Owner**

- Adjust \(\uparrow\): Low water usage, such as brushing teeth; cycling.
- \(\uparrow\): Restrictive fixtures or water filters; cycling.
- \(\uparrow\): Unit is old and switch is weakening; cycling.
- \(\downarrow\): Fixtures that require lower operating pressures.

**How to adjust***

- Run fixtures separately at highest normal voltage.
- Find the most restrictive run.
- Check for clogged fixtures and filter cartridges.
- Turn screw clockwise to raise shut-off pressure, counter-clockwise to lower shutoff pressure.

**SWITCH SHUT-OFF ADJUSTMENT**

Restrictions in a plumbing system may cause the pump to rapid cycle (ON/OFF within 2 sec.) during low flow demands. Cycling should be minimized to prevent pulsating flow, and to achieve maximum pump life.

To determine if adjustment is necessary, turn a faucet ON to lower than average flow of water. The pump should cycle, but its "off time" must be 2 sec. or longer. If the cycling is correct, leave well enough alone. If the pump is cycling rapidly increase the setting by turning the screw clockwise (1½ turn MAX.) until the pump operates for 1 sec. with at least 2 sec. "off time". If cycling cannot be minimized consider removing plumbing restrictions or simply install a SHURflo Accumulator.
